

# The Sky is No Longer the Limit.

Enviro Filter Unit

Enviro Fan Unit

## Don't let rooftop duct runs and stringent code requirements restrict your imagination!

With the Spring Air Kitchen Enviro System (KES), you can put a commercial kitchen just about anywhere.

The KES provides a manageable solution to difficult commercial kitchen ventilation installations. By cleaning the exhaust air of grease and smoke particulate, it allows you to exhaust through walls or ceilings at low levels and still meet national and local codes. Now you can install a commercial kitchen in a high rise office tower or an expensive condominium development without the concern of costly duct runs or pollution emission.

Stadiums / Arenas

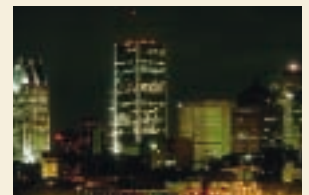

Hotels

Commercial / Residential Complexes

Office Towers

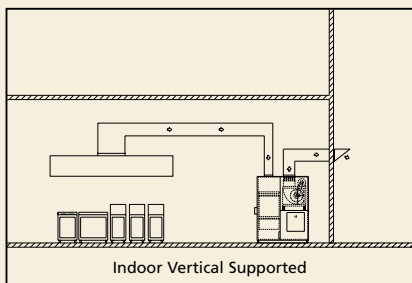

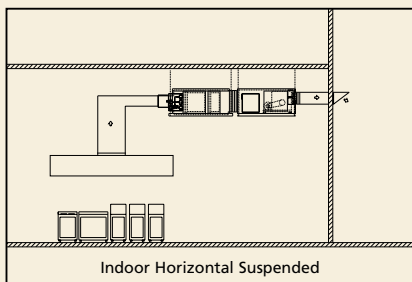

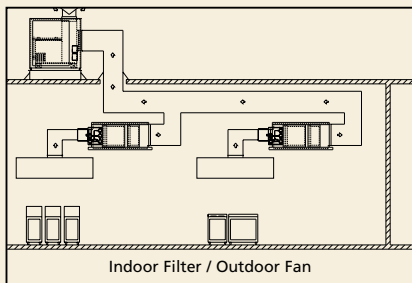

A rooftop KES keeps the neighbors happy.

# A versatile system that can be installed in just about any location.

A complete KES consists of the Enviro Filter Unit and a Fan Unit with an optional Odor Removal Section. The Spring Air three stage filtration system removes airborne grease, lint and dirt particulate to meet UL/ULC standards. A fan unit can handle single or multiple filter units allowing for a variety of possible indoor/outdoor configurations and installation locations. Systems can handle from 1,000 to 40,000 CFM.

Spring Air is an industry leader in commercial kitchen exhaust solutions. We will supply you with specifications, equipment drawings, maintenance and operating costs for your ventilation system that will meet all local and national codes, and of course your budget.
